

# Overview

## Management Server by Agilent

Centralized reporting and system management for Insight bottle scanners

Supplied by Agilent, the Overview management server provides centralized management and reporting for the Insight range of liquid explosive detection systems. Overview monitors and reports across multiple checkpoints, terminals, and airports and is accessible through a simple and secure web browser interface.

### Compliance

Comprehensive data reporting to aid regulatory compliance

Configurable with selectable levels of detail

Data pushed to managers through scheduled messages in Overview

Centralized data backup and archive

### Management

Real-time system management

Configurable across groups of scanners by checkpoint, terminal, or airport

Upgrades and updates deployable to individual units in a single operation

User management for Insight users and Overview users

### Accessibility

Securely accessible from any location through encrypted Web connection (on intranet)

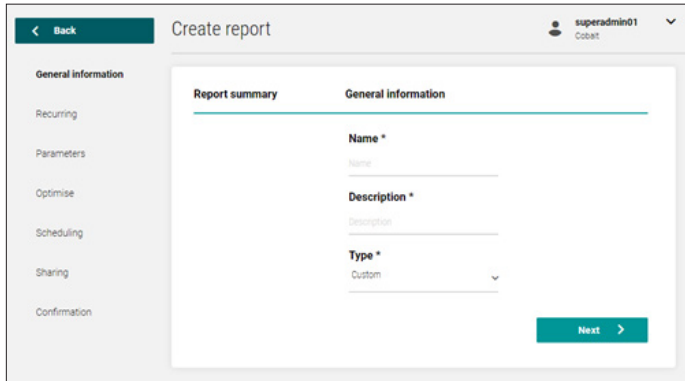

Remote monitoring of system health and alarms

Centralized control of user access

Consolidate data from multiple terminals and airport locations

## Reporting

Overview continuously monitors each Insight system. The report function allows you to use prepopulated templates, as well as create new templates and one-off reports through a reporting wizard. You can generate reports by Insight, Lane/Gate or airport location and send them by regular, scheduled Overview messages to management for review.

Report wizard

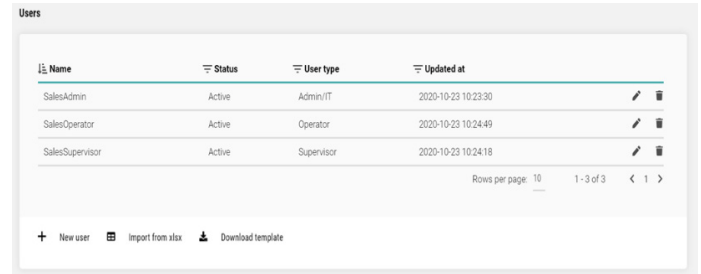

## Management

Overview is an essential part of the quality control and assurance of your airport's security management. A single console allows you to assess the health of the fleet, manage corrective actions, and analyze security incidents.

Insight fleet

All Insights are managed from a central location with permissions, logins, record access, and usage set by user group. You can change system configurations as required across all, or a selection of, machines. Upgrades to the Insight software can be pushed to the machines from the management console, which reduces system downtime (subject to software upgrade type).

User Groups

## Deployment of Overview

Please contact Agilent for a demonstration of Overview.

## Overview server and IT requirements

Requirement	Minimum Required
Operating System	Runs in a virtual machine
Configuration	Minimum specification of the virtual machine: <b>Operating system:</b> Windows 10 Professional <b>Type:</b> X64 <b>Version:</b> 1909 <b>RAM:</b> 8 GB <b>Storage:</b> (HDD) 120 GB <b>Cores:</b> 4
Minimum PC	Intel Core i7, 16 GB RAM
Storage	80 GB OS, 500 GB data partitions
Network	Ethernet connection of instruments to server Wi-Fi is possible – contact Agilent
