# It's more than just a vial, it can affect your results and return on instrument investment

It's easy to think of vials as simple, inexpensive components that don't affect your results. However, substandard vials, caps, and septa can lead to sample loss, contamination, and damaged autosampler needles.

Agilent understands that vials are a critical part of your analytical workflow—no less important than the column or the instrument. This is why Agilent vials are designed to meet the high standards you expect from every Agilent product. These standards include:

- Consistent lot-to-lot performance
- Rigorous quality control and manufacturing
- Better value for your money
- Easy selection based on volume, sample type, and instrument

## Stop unexpected peaks from impacting your results

Sometimes, vials measure the indirect effects of the analytical flow path instead of the sample. With Agilent vials, you know that only your sample is being measured, nothing else.

Agilent offers a comprehensive solution for getting your samples from injection to detection with minimal interference to maximize your productivity.

## Facts and Figures

Only Agilent vials have these quality and performance statistics

**30%**  
time savings

Save time using our full range of short-thread screw top vials and caps.

**\$0**  
for technical support

Unlike some other suppliers, Agilent does not charge you for technical support.

**50%**  
faster crimp speed

Our electric crimper lets you crimp your vial quickly and efficiently.

**30+**  
inspection points

So you get the tightest dimensional specifications, every time.

**10+**  
compatible brands

Agilent vials/caps are compatibility tested with over 10 instrument brands.

**Up to  
\$100K**  
saved annually

by a number of customers, using Agilent technical support and recommended vials.

**33/51**  
best in glass

All vials are made of type 33-51 coefficient of expansion for top performance.

**25%**  
cost savings

Save up to 25% in operating costs with A-Line vials.

# Save money, and eliminate drains on your lab's productivity

## Why gamble with your results?

Using poor-quality vials (or the wrong vials for your application) can cause sequencing problems, unnecessary downtime, expensive repairs, and the loss of precious samples

Agilent vials are reliable and consistent, saving time and money.

- **Reduced labor:** Our short-thread screw top vials make screwing/unscrewing caps up to 30% faster.
- **Less interference:** Agilent vials are made from analytical grades 33 and 51 glass, which will not remove analytes from sample matrices.
- **Fewer septa issues:** Agilent septa are continually being improved to limit leaching, coring, sticking, push-through, hardness, and adsorption/absorption.
- **Lower risk of breakage:** Thicker glass walls help eliminate cracking during clamping, and a unique packing box keeps vials safe during transit and storage.
- **Fast delivery and easy ordering:** Everything you need from one trusted supplier, with worldwide distribution centers so your vial order reaches your lab within 48 hours.
- **Free 24/7 technical support:** Our team is always available to provide fast, expert assistance, should any issues arise.

### Certified integrity and consistency

Agilent Certified Vials are produced in an ISO 9001 certified environment and packaged to reduce contamination. Our vials are pierce tested with Agilent needles and syringes, inspected with automated vision systems, and compatible with autosampler gripping and injection mechanisms.

# Agilent A-Line vials

The trusted choice for your precious samples and high-precision analyses

- **Save time:** Dramatically reduce the number of sample reruns.
- **Get higher throughput:** Surface inertness reduces peak response variability for more accurate results and less rework.
- **Attain consistent recoveries:** Be confident you're getting the most precise and consistent measurement from vial-to-vial, lot-to-lot, and over time, of low-level analytes.
- **Spend less:** Save up to **25%** on your laboratory spend by significantly reducing unplanned costs (such as troubleshooting, reruns, and downtime).
- **Conform with demanding and regulated environments:**  
Our Certificate of Analysis provides specific data confirming vial appropriateness.

## Tips and tools

See our case study video on cost reducing:

## Tips and tools

### Here's why "bargain" vials are not much of a bargain

Bargain vials can be made from type 70 or 71 COE glass, which has high metal content that can remove analytes or destabilize the analyte through alkyl leaching. Agilent vials are made from type 33 and 51 glass so you can be confident that your results will not be compromised.

To learn more about glass quality, download our free white paper at  
[www.agilent.com/chem/vialsresources](http://www.agilent.com/chem/vialsresources)

### Vial glass types

ASTM E438 Type I Class A Linear COE	ASTM E438 Type I Class B Linear COE
32 – 33 (+/- 1.5)	48 – 56 (+/- 2.0)

Coefficient of expansion (COE) compliance – 0 to 300 °C, cm/cm x C x 10<sup>-7</sup> (acceptable expansions for analytical chromatographic purposes).

# Protect sample integrity by choosing the best vial for your application

By matching our vials to your application, you can contain samples with minimal interference from the surrounding environment, and ensure optimal sample interface with your analytical platform. To help you get started, we've answered the most common questions about vial selection below.

## Which vial is best for my sample size?

There are several factors to consider, including analysis type, analytical platform, and sample availability. Agilent vials offer the same highly consistent performance across the entire size range, from 15 µL to 60 mL. Use the diagram below as a starting point for choosing the size you need based on your sample volume.

## How do vial components factor in?

Vial caps, septum, and inserts prevent leakage and sample loss due to evaporation. Like Agilent vials, Agilent vial components receive the same high level of attention during design and manufacture. They also work seamlessly with Agilent vials so that complex runs proceed smoothly.

## How do I choose the right closure?

There are three major factors to consider when selecting a closure.

### Compatibility of septa and sample

Make sure the septa you choose are chemically compatible with your sample and solvent. Chemical compatibility can vary, based on factors such as solvent concentration, molecular weight, and temperature.

During manufacture, Agilent septa undergo thermal and chemical conditioning to reduce siloxane bleed, which can occur when the septa material is stressed during heating, solvent interaction, or piercing by the autosampler needle.

### Septa Chemical Compatibility

	PTFE	PTFE/Silicone	PTFE/Silicone/PTFE*	PTFE/Red Rubber	Fluoroelastomer	PTFE/Butyl
Acetonitrile	●	●	●	●		●
Hydrocarbons (hexane, heptane, methane)	●		●	●	●	
Methanol	●	●	●	●		●
Benzene	●		●		●	
THF	●		●			
Toluene	●		●			
DMF	●	●	●			●
DMSO	●	●	●			●
Ether	●	●	●			
Chlorinated solvents (methylene chloride)	●		●		●	
Alcohols (ethanol)	●	●	●	●	●	●
Acetic acid	●	●	●			●
Acetone	●	●	●			
Phenol	●	●	●		●	●
Cyclohexane	●		●	●	●	

\*PTFE/silicone/PTFE has the same chemical compatibility of PTFE only until punctured.

### Tips and tools

5183-4496

5183-4437

For highly sensitive samples, we recommend PTFE-lined ("sandwiched") septa, because the PTFE layers act as a chemically resistant barrier.

## Compatibility of septa and cap

Use the chart below to determine the right cap and septa combination, based on your application.

Note: septa that are too thick can prevent the cap from fitting properly on the vial.

If siloxane interference is a concern for your application, we recommend Agilent Certified caps and Agilent Certified bonded caps. They provide the industry's lowest bleed profile for better analytical sensitivity, reduced downtime, and improved productivity.

### Cap and Septa Compatibility

	High Performance Septa	Thin PTFE	PTFE/Silicone*	PTFE/Silicone/PTFE*	PTFE/Red Rubber	Fluoroelastomer	Butyl
Temperature range	40 to 300 °C**	Up to 260 °C	-40 to 200 °C	-40 to 200 °C	-40 to 90 °C	-40 to 260 °C	-50 to 150 °C
Use for multiple injections	No	No	Yes	Yes	No	No	No
Price	Most expensive	Very economical	Economical	Most expensive	Very economical	Economical	Economical
Resistance to coring	Excellent	None	Excellent	Excellent	None	None	None
Recommended for storage	No	No	Yes	Yes	No	No	No
Best for	High temperature headspace applications	Superior chemical inertness, short cycle times, and single injections	Most common HPLC and GC analyses, not as resistant to coring as P/S/P	Superior performance for ultra trace analyses, repeat injections, internal standards	Chlorosilanes, more economical option for single injections	Chlorinated solvents, higher temperatures	Organic solvents, acetic acids, impermeable to gasses

\*Agilent silicone is peroxide-cured, making it more inert and less likely to interact with samples.

\*\*For up to one hour

## Crimp cap vs. screw cap

Based on decades of chromatography experience, we have found that crimp cap vials tend to be best for GC and GC/MS applications, while screw cap vials are generally used for LC and LC/MS applications. However, your specific application—as well as your personal preference—are also factors to consider.

Although both types of caps deliver a good seal, crimp caps provide extra security for food, forensics, and other applications where sample tethering needs to be avoided. We also recommend a screw cap vial if you are working with volatile compounds.

## Vial Selection

### Where to measure to match the vial size with its cap

Determine the right vials and caps for your needs. The table, with corresponding diagrams, shows where to take the measurement.

#### Vial and Closure Dimensions

Cap Type	Septum (Diameter)	Vial Closure (Septum Seat Diameter)	Vial Closure (od)	Vial Closure (Opening id)	Comments
2 mL (wide opening)					
Screw	9 mm	9 mm	12 mm	6 mm	
Crimp	11 mm	11 mm	11 mm	6 mm	Closure od and septum seat diameter are very close since the crimp cap wall is thin. After rounding, they are both 11 mm.
Snap	11 mm	11 mm	12 mm	6 mm	
2 mL (short opening)					
Screw	8 mm	8 mm	12 mm	5 mm	Closure od is measured at the flared base.
20 mm Headspace					
Crimp	20 mm	20 mm	21 mm	9 mm	The septum has a larger od than the septum seat diameter to provide a snug fit. This prevents septum loosening.
20 mm Headspace					
Screw	18 mm	18 mm	19 mm	8 mm	Closure od is measured at the flared base.

Closure when adjoined to screw top vial.

B = Septa seat diameter

C = Cap body diameter (vial closure od)

D = Cap opening id (vial closure opening id)

Septum only.

A = Septum diameter

## What about more specialized applications?

5183-4496

### Deactivated vials

For pesticides, semivolatiles, and other highly sensitive samples—as well as samples that are prone to sudden pH shifts—deactivated vials are best, because their surface is more hydrophobic and inert.

We also recommend deactivated vials for exacting applications, such as mass spectrometry, to prevent sample interactions before analysis.

5191-8150

### Polypropylene vials

Polypropylene vials are an excellent choice for biological and PFAS applications, and for applications involving samples with high metal content—such as ion chromatography, AA, or ICP-MS.

Agilent thoroughly tests and evaluates various polypropylene materials before selecting the grade used in our polypropylene vials. Our vials have the lowest levels of extractables to ensure sample integrity.

## Need more information?

### Hundreds of choices, one easy guide

Use our online selection tool to quickly find the right products for complete confidence in your sample containment.

- Answer a few simple questions to identify your best options
- Search by technique, product number, or vial type
- Choose from over 600 vials, caps, and septa

Go to [www.agilent.com/chem/selectvials](http://www.agilent.com/chem/selectvials)

### Agilent 90-day warranty and money-back guarantee

All Agilent vials are designed and manufactured to stringent standards under the Agilent quality system registered to ISO 9001. If Agilent receives notice of defects during the warranty period, Agilent shall either repair or replace products that prove to be defective. If Agilent is unable, within a reasonable time, to repair or replace any product to the warranted condition, the buyer shall be entitled to a refund of the purchase price upon return of the product to Agilent.

## Save Time and Simplify Routine Tasks

Replace your manual crimpers with the next stage in crimping technology

Agilent handheld electronic crimpers deliver tight, reproducible seals every time. Slim, adjustable steel jaws fit around closely spaced vials, enabling you to crimp vials directly in crowded autosampler trays. Handheld electronic decappers remove caps instantly, and are designed for labs that recycle or re-use vials.

Description	Part No.
Crimper	
Electronic crimper, 11 mm, with lithium battery	<a href="#">5191-5616</a>
Electronic crimper, 20 mm, with lithium battery	<a href="#">5191-5615</a>

Electronic decapper, 20 mm, with lithium battery	<a href="#">5191-5613</a>
Replacement lithium battery for crimper and decapper	<a href="#">5190-3192</a>

## Cut your crimping time in half with Agilent high-power electronic crimpers

Electronic crimpers give you the power to crimp vials in half the time of a manual crimper. We recommend the high-power crimper if you are using steel caps.

Description	Cap Size	Part No.
High-power electronic crimping tool, with power supply		<a href="#">5191-5617</a>
Base for electronic crimping tool		<a href="#">5190-4066</a>

## Accessories

### Stop wrist strain with ergonomic Agilent manual crimpers, for higher throughput on a limited budget

With their lightweight, tailored design, Agilent manual crimpers and decappers help eliminate the problem of sore, pinched hands. They are also built to last; the 11 mm crimper will complete at least 100,000 cappings, and the 20 mm crimper will complete at least 60,000 cappings.

Description	Cap Size	Part No.

### Tips and tools

Watch our "Crimping a Vial Made Easy" video at  
[www.agilent.com/chem/crimpingvideo](http://www.agilent.com/chem/crimpingvideo)

### The right vial is only a few clicks away

Use our online selection tool to quickly find the right products for complete confidence in your sample containment.

- Answer a few simple questions to identify your best options
- Search by technique, product number, vial type, or instrument manufacturer
- Choose from over 600 vials, caps, and septa

Go to [www.agilent.com/chem/selectvials](http://www.agilent.com/chem/selectvials)

## Technical support

Have a hardware, software, application, instrument repair, or troubleshooting question? Agilent technical experts are available to answer your questions. With years of laboratory experience, our technical support specialists can provide in-depth knowledge and experience.

For questions about supplies found in this catalog, contact your local Agilent office or authorized Agilent distributor. Or visit [www.agilent.com/chem/techsupport](http://www.agilent.com/chem/techsupport).

## Agilent CrossLab: Supporting Your Success

CrossLab is an Agilent capability that integrates services and consumables to support workflow success, improve productivity, and enhance operational efficiency. In every interaction, we strive to provide insights that help you achieve your goals. We offer a wide range of products and services – from method optimization and training to full-lab relocations and operations analytics – to help you manage your instruments and your lab for best performance.
